EMPLOYEE SELF-EVALUATION FORM

PLEASE FILL THIS PAGE IN CAPITAL LETTERS

Name of the Employee	Giridharan A
DOB	25-05-2000
ASM Employee ID	8758
Business Unit / Group	GIS
Designation	Cloud Network Engineer
Date of Joining	28/04/2025
Highest Qualification	BCA
Total Experience	3
Relevant Experience	3
ASM – AMAT Experience	1
AMAT PSID	X0158025

A. Giridharan

Date: 20/04/2026

Signature of the Employee

EMPLOYEE SELF-EVALUATION FORM

On receiving the Assessment form, the employee has to **FILL** all particulars

Job description

- How would you describe your main responsibilities?

My primary responsibilities initially focused on cloud networking, where I handled L1 and L2 ticket queues, ensuring timely resolution within SLA. The scope of work included provisioning and managing cloud networking components such as private endpoints, VNets, subnets, VPCs, and VPC endpoints, along with troubleshooting network-related issues involving NSGs and ASGs. I also coordinated with AWS and Azure support teams for resolving cloud-level issues. I was given firewall administrative responsibilities, where i am implementing FCRs on both on-premises and cloud environments.In recent months, I have transitioned to the AI and Kubernetes team. In this role, I work on cluster operations across platforms such as ARO, EKS, AKS, and ROSA, including node scaling (scale up/down), certificate renewals, node provisioning, and monitoring node and pod health across environments. I also use Datadog for monitoring and support deployment activities such as pushing and pulling container images. Creating new App services in Azure . Troubleshooting issue across the kubernetes and openshift platforms during the outage and issue situation.

- Have these responsibilities changed over time

Additionally, I am involved in AI and Automation related initiatives.
Yes, my responsibilities have evolved significantly over time. I initially started with a focus on cloud networking, handling L1 and L2 operations, managing ticket queues, and working on network provisioning and troubleshooting ,Based on my performance, I was given with firewall administration responsibilities, where I handled firewall rule implementation across both on-premises and cloud environments. More recently, I have transitioned into the AI and Kubernetes domain, where my responsibilities now include managing cluster operations, node scaling, monitoring, and supporting AI-driven infrastructure and automation initiatives.

This progression has allowed me to expand my expertise in Networking, Firewall and AI and Kubernetes platforms.

- Do you carry out any other tasks, and if so, which?

Yes, in addition to my responsibilities, I have contributed to some other areas as well . I have been involved in handling multiple outage situations, where I contributed to timely resolution and service restoration. I have also supported migration activities, including application migrations from on-premises environments to the cloud.

In the automation area, I have developed scripts and tools to improve the repetitive tasks. These includes multiple dns lookup in one go using powershell script, browser-based redirection tools for handling multiple short URLs during migrations with powershell script, and a firewall log analyzer to help quickly identify allowed or blocked traffic using python and HTML.
Created AI based backup ticked remidiation tools which will helps in remidiating the system tickets upto 30% which will significantly reduce the engineer time. Currently working on AI based PCA Finder across our Infra

- What could your immediate manager do to help you be more successful in your job?

Providing clear prioritization of tasks, regular feedback, and opportunities to work on advanced technologies, AI-related projects would help me further enhance my skills and contribute more effectively.

Performance vs Achievements

- What action have you taken to fulfil your responsibilities?

To fulfill my responsbilities i worked on resolving cloud networking and firewall-related tickets and FCRs and making sure tickets are closed on time. I have also supported during outage situations and helped in application migrations from on-prem to cloud. I worked on some automation for repetitive tasks to make work easier and faster. After moving to the Kubernetes and AI team, I started supporting cluster operations, monitoring, and related activities.

- Do you feel you've been successful during this period?

Yes, I feel I have been successful during this period. I was able to handle my responsibilities in cloud networking and firewall effectively, and I also adapted well after moving to the Kubernetes and AI team. I was able to learn new things and contribute to the team while continuing to support ongoing tasks.

- Do you think you could have done anything better?

Yes, I think I could have done better in terms of connecting with more people across different technologies, which would have helped me gain a wider perspective and better insights in my field. I am working on improving this by collaborating more with cross-functional teams.

- How do you think you have contributed to your BU/Group during this period?

I have contributed by handling multiple incidents resolved within the given time and implemented fcrs on both cloud and onprem firewalls, supported during the outage situations and during the migrations of applications. After moving to kubernetes team i am supporting on cluster operations(ARO, ROSA, EKS, AKS) and monitoring in all the cloud environments AWS, Azure, GCP. Additionally I have added some of the AI initiatives that will support our Infra team to become more stronger in the upcoming days.

- What are your main strengths?

My main strengths are problem-solving, especially in networking and firewall-related issues, and my ability to learn new technologies quickly. I am adaptable and was able to move from cloud networking to Kubernetes and AI . I also focus on completing tasks on time and supporting the team during critical situations.

- In which areas do you feel you could improve?

I think I can improve by gaining deeper knowledge in AI, as it is a growing area. I would like to explore how it can be integrated into our infrastructure to improve resolution time and make issue handling faster.

- Are you aware of the purpose of Time Sheet?

Yes, I am aware that the purpose of the timesheet is to track work hours, attendance, shifts, and leave, and to ensure proper reporting of work.

- Are you aware of the Time Sheet policies and guidelines?

Yes, I am aware of the timesheet policies and guidelines, and I am making sure to follow them consistently

- Do you expect a follow up / reminders on Timesheet Submission?

I usually submit my timesheets on time. In a few cases during heavy workload, reminders have helped. I am working on submitting them on time consistently.

Objectives

- What objectives have you reached during this period?

During this period, I handled cloud networking and firewall tickets and made sure it closed on time. I also moved to the Kubernetes and AI team and started working on cluster operations, monitoring, and related activities.
I worked on some automation to reduce manual effort and make tasks easier. Along with this, I also completed a few DevOps and AI-related certifications to improve my skills and support my work better.

- Which ones did you not manage to achieve, and why?

I was not able to focus as much as planned on some advanced Kubernetes and AI Rag topics due to other work priority on day-to-day operational activities. However, I am working on improving this and planning accordingly going forward.

- What objectives do you propose for the next period?

I plan to work on building AI-based automation (AI agents) that can help with infrastructure tasks and reduce manual effort. Along with this, I will continue improving my knowledge in Kubernetes and AI, take more ownership in my work, and grow further in my role.

Name: GIRIDHARAN ARUL

Designation: Cloud Network Engineer
